

ABSTRACT OF THE DISCLOSURE

The invention relates to a part (1) comprising an airbag safety device (21), an instrument board element (3) formed with an extraction flap (13) of the bag, a frame (23) which is fixed to the instrument board element (3) in such a way as to form a channel (65) for guiding the unfolding of the bag, and a shutter (25) for reinforcing the flap (13), a retaining part (93) of said shutter being connected to the frame (23) by means of at least one retaining hook (95). Said hook (95) is formed from one piece with the shutter (25), and co-operates with a complementary shoulder (87A) formed with the frame (23) when the device is triggered. The invention also relates to a method for assembling one such part (1).
